

CONSTRUCTION PHASE HEALTH AND SAFETY PLAN

Any premises, property or structure that requires construction work will, from 6 April 2015, need to appoint a contractor that communicates a Construction Phase Health and Safety Plan. This plan includes the exact measures required to address the specified risks listed in the new Construction (Design and Management) Regulations 2015. Before any work commences onsite, the plan must be in place and deemed suitably sufficient by the client.

Tennyson Suite's specialist consultants provide a bespoke construction site service that consists of the preparation, updating and communication of Construction Phase Health and Safety Plans.

Key Features of our Service

- Responsive service by a conversant specialist in the field of construction
- Our construction specialist safety adviser will conduct a site inspection, develop the plan alongside site rules, undertake an induction and organogram for the construction works to be undertaken
- Pragmatic advice on specific safety issues with cost considered solutions, that can be easily implemented and managed
- Systems documentation to assist in managing and recording the workplace activities in support of your plan

Key Benefits of our Service

- Specific Health and Safety Plan for your project
- Ready for immediate use
- Documentation immediately available online
- BIM compliant
